Status: 01/2025

Products need labeling

Label software cablabel S3

cablabel S3 software

Date formats, mathematical and logic functions are provided by the intuitive user interface.

- 1 Toolbar to create different label objects
- 2 Tabs
 to quickly switch from one label design to another
- 3 Layers to administrate different label objects

Design, print, administrate

cablabel S3 opens up the full potential of cab devices.

Defining a label is first. Modular design adapts cablabel S3 to requirements step by step. Plug-ins are embedded. Native JScript programming, for example, is supported by the JScript Viewer. The designer user interface and JScript codes synchronize in real time. Optional features can be integrated, such as the Database Connector or barcode verifiers.

- Designer to simplify layout and display a label in WYSIWYG mode
- Frinter spooler to monitor all print jobs and states of a printer
- Drivers to manage settings and the interaction with devices

Supported functions

cablabel S3 unites features like native programming and database connectivity.

JScript

cab printers embed JScript language. As for the import/export of JScript files, cablabel S3 supports native functions. Download free manual on www.cab.de/en/programming

H 100 S l1;0,0,68,70,100 T 10, 10,0,5,pt20;sample B 10.20.0.EAN-13.SC2.401234512345 Barcode EAN 13: size SC 2 G 8,3.5,0;R:30,9,0.3;0.3

Job Start Speed (100 mm/s) Orientation rotated by 180° Size of label (100x68 mm, gap 2 mm) Text object/font: Swiss bold, 20 pt Graphic, box 30 x 9 mm. Line weight 0,3 mm Number of labels (in this example 1)

ABC abc BASIC Compiler

Integral to the firmware, abc in addition to JScript enables advanced programming before data are edited for printout. For example, external printer languages can be replaced without intervening in a print job in progress. cablabel S3 enables for integrating required components to the program when designing a label.

Connecting to SAP®

Labels can be printed from SAP¹⁾ on cab devices and systems. There are various methods:

- Printing with SAPscript
- **Printing with SmartForms**
- Printing with Adobe Interactive Forms

See instructions in detail on www.cab.de/en/sap

1) SAP sowie die dazugehörigen Logos sind Marken oder eingetragene Marken der SAP SE

Database Connector

Printers in a network may access data from a ODBC/OLEDB database and print it on labels. Data can be rewritten to a database while print jobs are in progress. Providing the Database Connector integral to cablabel S3 allows for connecting to a database comfortably when designing a label.

cablabel S3

Designer

You design a label. The display corresponds to its printing (WYSIWYG). You define texts, graphics, barcodes and insert variable data in date prompts or counters, maybe using a database connected. You adapt the design to your print requirements using formulas, string formatting or logical commands. Layers allow managing a label. For example, you assign a barcode to several layers and assign a resolution to each layer. By this, a barcode is automatically printed in the correct resolution. Activating or locking a layer requires only a single click.

Hardware management

You install the required device drivers or adjust the settings and the interaction with devices connected.

Printer spooler

It monitors all printers and displays their states. Print jobs are saved if interrupted, new ones are added automatically.

cablabel S3 Viewer

cablabel S3 Viewer previews a label in the Windows Explorer. The Viewer may support for example in approval processes, as well with supplier requirements. Free download on the cab homepage

cablabel S3 Lite

cablabel S3 Lite allows for managing all cab printers, creating and printing simple labels. Fixed data blocks, barcodes or images may be inserted, counters and prompts be managed for stand-alone operation. Free download on the cab homepage

cablabel S3 Demo

cablabel S3 Demo enables installing and testing cablabel S3 Pro software for free for a maximum of 30 days (JScript viewer is excluded, stand-alone mode is not supported). Printing is limited for testing.

Download on www.cab.de/en/information/contact/?demo

With cablabel® S3 Pro you create label designs for professional industrial sector and develop solutions for your label printing.

cablabel® S3 Demo enables interested users to install and to test the software for free. All functions of the Pro-product are available, except the JScript viewer and the support for stand alone mode. Printing is also possible, but limited only for testing. The use is limited during 30 days and for one activation.

If you want to try cablabel S3 Pro 30 days for free please download the demo version and request the activation code.

1. Download demo version

> cablabel S3 Demo (55 MB)

cablabel S3 Pro

cablabel S3 Pro is the most comprehensive version of the software. It is possible to create labels for the professional industrial sector and develop your own label printing solutions, to add all kinds of texts, barcodes or images, whether fixed or variable. Date and time, advanced counters and prompts, mathematical or logical formulas may be as well inserted. Data maybe based also on a database compatible with ODBC/OLEDB. cablabel S3 Pro helps with creating labels compliant to international business-specific regulations such as GHS, allergens, etc.

Special features such as the Database Connector or barcode verification can be integrated as intended. Thanks to the availability of Windows drivers, cablabel S3 Pro manages printing on any type of printer. cablabel S3 Pro can be provided for use on a single or on multiple workstations and requires software activation.

cablabel S3 Print

cablabel S3 Print has been developed for operators in manufacture or warehouse. Labels created with cablabel S3 Lite or cablabel S3 Pro software can be accessed and printed. The simplified user interface provides only functions necessary for label printing. Labels selected from a list are displayed for visual control. Then you enter variable data and the quantity to be printed. Your work is simplified, sources of errors are reduced.

There are three ways to access a label:

- Manually (Standard mode)
- By dialog box (AutoLabel mode)
- Automatically (AutoFile mode)

Printer settings may be as well loaded from a database, such are

- · printing quantities,
- · selections of printers,
- · warning messages.

A "Print Configurator" is delivered with each cablabel S3 Print version.

Manual access: Standard mode

The operator selects a label. It is displayed. The user fills in the prompts and print quantity, before printing starts on a selected device.

Manual access can be used also in other modes when printing occasionally.

Classic printing

Printing by prompts

Access by dialog box: AutoLabel mode

The operator selects, for example, an article number from a preset choice list. The label is automatically loaded, so are all the associated print settings. If required, the operator may change the prompts and print quantity, before printing starts on a selected or preset device.

A database with the printing information is required (fields for choice list, label filename. etc.)

Selection from a choice list

Display of a label and print settings for selection

Automatic access: AutoFile mode

The A label specified in a print file is automatically opened by a task list and printed. The next label on the list is accordingly handled. After a visual check, the operator, if required, may change the prompts and print quantity, before printing starts on a selected or preset device.

Print files from a tasks list hold all needed print settings. They can be set using an ERP or any other tool capable of generating a compatible text file. New values may be assigned to objects as well (like a "Replace" file).
