EU - Conformity Declaration

We declare herewith that as a result of the manner in which the machine designated below was designed, the type of construction and the machines which, as a result have been brought on to the general market comply with the relevant fundamental regulations of the EU Rules for Safety and Health. In the event of any alteration which has not been approved by us being made to any machine as designated below, this statement shall thereby be made invalid.

Description: Type:
Transfer Printer A-series (A3)

Applied EU Regulations and Norms:
- EC Machinery Regulations 98/37/EU
- EC Low Voltage Regulations 73/23/EEC
- EC Electromagnetic Compatibility Regulations 89/336/EEC
  - Threshold values for the Interference of Data Machines EN 55022:1998
  - Limits of voltage fluctuation and flicker EN 61000-3-3:1995
  - Interference Resistance in both Industrial and Small Plants EN 50082-1:1992-12

Signed for, and behalf of, the Manufacturer:
cab Produkttechnik Sömmerda

Erwin Fascher
Managing Director

General Safety Instructions

1. The printer is built exclusively to print die-cut labels, continuous media, and similar materials !
2. Connect the printer to an outlet with the correct voltage ! The printer is configured for voltages of 100 to 240 V. Connect only to a power outlet with a grounded contact !
3. The printer must only be connected to devices which have extra low voltage !
4. Power must be OFF before plugging in any accessory, connecting to a computer and before performing any maintenance on the printer. Also turn the power off on all appliances before disconnecting from the printer !
5. Do not expose the printer to any moisture, or use in damp or wet areas !
6. The printer will operate with the cover open if necessary. If the printer must be operated with the cover open, extra care must be taken to avoid allowing hair, jewelry, clothing, etc. near the moving parts !
7. During the print process the printhead will become hot. Use extra caution when touching the printhead. Do not touch the printing surface of the printhead with your hand !
8. Before starting any maintenance, power OFF the printer and disconnect the printer from the outlet !
9. Any adjustments or repairs which are not described in this manual, should only be carried out by an authorized service technician !

WARNING !
To avoid possible electric shock, do not open the backside cover !
Connecting the Printer

Connection to Power Supply

The printer is equipped with a wide range power unit (100-240V~), so it is possible to use the printer both with a voltage of 230V~/50 Hz and with a voltage of 115V~/60 Hz without making changes to the printer.

CAUTION!
Make sure the power switch (6) is in position "O" (OFF) before connecting the printer to a power supply!

Connection to a Computer

As standard, the printer is equipped with a bi-directional parallel interface (4) and a serial RS-232-interface with a 9 pin connector (5).

For serial connection, make sure the serial interface RS-232 of the printer is correctly configured to the settings of your computer (see Operator's Manual).

Connect the computer and the printer with a suitable cable (1,2) and secure the cable connections with screws provided on the connectors.

CAUTION!
Make sure that all connected computers and their connecting cables are correctly grounded.
The following steps are valid for loading labels in tear-off mode. Instructions for loading labels in rewind or dispense mode and for loading fanfold labels can be found in the Printer's Operator Manual or in the documentation of the Present Sensor.

1. Loosen the knurled screw (3), swing the media retainer (4) upwards and slide it out as far as possible.
2. Place the media roll (5) onto the media hub (6) and unwind a strip of media from the media roll. Make sure the labels are facing up. Slide the roll onto the media hub (6) until its stops.
3. Swing the media retainer (4) downwards until it touches the media hub (6). Push the media retainer against the supply role until it rests against the label media. Tighten the knurled screw (3).
4. Raise the printhead assembly (1) by rotating the lever (2) clockwise until it stops.
5. Slide the media guide ring (7) outward, allowing enough clearance for the label stock’s width when loaded.
6. Slide the media strip through the printer as shown in figure 2. The feed path for labels wound-out is represented by a solid line, and the feed path for wound-in labels is represented by a broken line.
7. Move the label edge sensor assembly (8) in such a position that the sensor (9) itself can detect label gaps, notches or reflective marks. The adjustment of the sensor is performed by sliding the handle (10) in and out.
8. Slide the media guide ring (7) inward until it lightly touches the side of the media strip.

9. Lower the printhead by rotating the lever (2) counter-clockwise until it locks.

10. When printing narrow label stock, it is necessary to activate the printhead support.

Adjustment of the Printhead Support

When printing narrow label stock (width less than the half of the maximum print width), it is possible that the printhead will come into direct contact with the printing roller in the area where there is no media. This could lead to premature failure on the printhead and can also cause a variation in the darkness of the print across the label. This fault can be corrected by adjusting the printhead support (2):

1. The current position of the printhead support (2) is visible at the scale on the elongated hole (4).

2. For wide media position 1 is recommended. In this position the printhead support (2) is not used.

3. For narrow media, loosen the knurled knob (3) and slide it slowly towards position 5. The printhead (1) is lifted upward away from the printing roller.

4. Check the adjustment by printing a label to check the print darkness.

5. Once you are satisfied with the printed image, tighten the knurled knob (3).
Loading Transfer Ribbon

CAUTION!
To avoid premature deterioration of the printhead, make sure the transfer ribbon is slightly wider than the width of label backing.

NOTICE!
For direct thermal printing no transfer ribbon is needed!

1. Raise the printhead assembly (2) by rotating the lever (1) clockwise until it stops.
2. Slide the roll of transfer ribbon (5) as far as possible onto the ribbon supply hub (6).
3. Hold tight the supply roll (5) and rotate the knurled knob (7) counterclockwise to clamp the roll onto the ribbon supply hub (6).
4. Slide a cardboard core (3) onto the ribbon take up hub. Clamp the core by rotating the knurled knob (4) counterclockwise.
5. Feed the transfer ribbon along the path as shown in figure 5 and attach it to the cardboard core (3) using a piece of tape or a label. In figure 5 the solid line represents ribbon with ink on the inner side, and the broken line represents ribbon with ink on the outer side.
6. Turn the ribbon take up hub counter-clockwise until the ribbon is taut and without any wrinkles.
7. Lower the printhead by rotating the lever (1) counter-clockwise until it locks.
Adjustment of the Transfer Ribbon

In the event that wrinkles appear in the transfer ribbon (1), which cause an inconsistent print image, the transfer ribbon shield (2) can be adjusted to remove the wrinkles. The adjustment should be done during the printing process.

1. The current position is visible on the scale (3).

2. To change the position, rotate the knurled knob (4). Rotating it in the direction of "+" will tighten the transfer ribbon the inner edge of the transfer ribbon. Rotating it in the direction of "-" will tighten the outer edge of the transfer ribbon.

To eliminate the wrinkles, tighten the side where the wrinkles are originating.

Figure 6
Control Panel

The control panel consists of a graphic display (1) and the Navigator Pad (2) with four integrated keys.

The control panel display constantly provides the operator with realtime information concerning the current printer mode and label processing.

The function and operation of the keys depends on the current mode.

The available functions are marked by illuminating the valid symbols and text in the keys.

Key Functions during Printing

<table>
<thead>

<td></td>
<td>- At the start of the menu, return to the system mode &quot;Online&quot;</td>
</tr>
</tbody>
</table>
**Printer Configuration**

There are a variety of parameters that can be set to configure the printer to specific requirements in the "Setup" menu of the Offline Menu. The setup should be performed when operating the printer for the first time and also when basic changes need to be carried out. In most cases however, simple changes such as heat setting adjustments, using different media will be made with software settings. The "Setup" menu can be protected from unauthorized access by using a code number (PIN).

1. Switch to the Offline Menu by pressing the **MODE** key.

2. Continue to press the **↑** key or the **↓** key until you reach the "Setup" menu. Press the **OK** key.

3. If the "Setup" menu is protected by a PIN the display will show "PIN: 0000". You will need to enter the correct PIN before you can continue. The numbers of the PIN can be changed by using the **↑** key and the **↓** key. The position to be changed will be flashing on the display. Press the **OK** key to move to the next number. If the correct number is entered, the "Setup" menu is displayed.

4. The parameters are arranged in a tree like structure. Pressing the **↑** key as well as the **↓** key will scroll between the secondary menus. By pressing the **OK** key, the selected secondary menu will be choosen.

5. If a parameter is selected, the display shows the actual value underneath the parameter. On the top line the symbol ▲ is shown. This symbol indicates that it is possible to switch between the parameter choices by pressing the **↑** key and the **↓** key.

6. To change the current setting press the **OK** key. Then the symbol ▼ is shown in the lower line of the display and it indicates that it is possible to change the setting of the parameter by pressing the **↑** key and the **↓** key.

7. Press the **OK** key to confirm the change. To cancel the change press the **OK** key. In both cases the symbol ▲ appears on the top line again.

8. Press the **OK** key several times if necessary to return to the "Setup" menu or to "Online" mode.
The following table is an overview about the setup parameters. Further details can be found in the Operator's Manual.

</table>

- **Country:** Set display language, date and time format
- **Time zone:** Set Time zone using UTC (Universal Time Coordinated)
- **Daylight saving:** Select method of daylight saving adjustment
- **Set date:** Set the printer's date
- **Set time:** Set the printer's time
- **Printhead pos. X:** Shift the print image on the label left to right
- **Printhead pos. Y:** Shift the print image on the label top to bottom
- **[Demand sensor]:** Parameters for Present Sensor (Option)
- **[Cutter]:** Parameters for Cutter (Option)
- **Brightness LCD:** Set the brightness of the display
- **Contrast LCD:** Set the contrast of the display
- **Time Powersave:** Amount of time before switching to powersave mode
- **Debug mode:** Activates the debug mode
- **Heat level:** Basic adjustment of the heat intensity
- **Print speed:** Basic adjustment of the print speed
- **Transfer print:** Basic selection of thermal transfer / direct thermal mode
- **Label sensor:** Method of label sensing
- **Tear-off pos.:** Activating a small feed at the end of the job
- **Backfeed:** Method of backfeed (always or smart) when using dispense mode or cut mode
- **Pause reprint:** Allows to print additional labels after finishing a print job by pressing the **PAUSE** key
- **Error-Reprint:** Selection of automatically reprinting a label after a correctable error has been fixed
- **Character set:** Select the character set table
- **RS-232:** Set the baud rate and the protocol
- **[RS-422/485]:** Configuration of the RS-422/485 Interface (Option)
- **[Ethernet]:** Configuration of the Ethernet Interface (Option)
Test Options

The printer is equipped with several test options, which are summarized in the "Test" menu of the offline menu.

1. Switch from the "Online" mode to the Offline Menu by pressing the [MODE] key.

2. Press the [↑] key or the [↓] key until the "Test" menu is displayed. Press the [OK] key to confirm the selection.

3. For all test print options load media and transfer ribbon which extends over the entire print width of the printer.

4. Select the test option to be carried out by pressing the [↑] key or the [↓] key. Press the [OK] key to confirm the selection.

- **Short status**
  Shows the most important information about the printer configuration on LCD. Use the [↑] key or the [↓] key to move between the different pieces of information. To leave the "Short status" display, press the [OK] key.

- **Status print**
  Printout of the most important setup and status information and a test pattern to display the quality of the print image (Fig. 8).

- **Font list**
  The important parameters of the font available in the printer are printed as a table. The table contains both the fonts saved in the printer internal memory and the fonts loaded into the printer.

- **Device list**
  The hardware components installed in the printer and the optional devices connected to the printer are displayed in this list.

- **Printhead profile**
  A diagram will be printed which shows the resistance values for the single printhead dots. When a dot is damaged or defective its resistance value increases.

- **ASCII dump mode**
  Method to print the control sequences sent to the interface. After starting the ASCII dump mode a print job is to send. The data received will be printed in text format depending on the selected character set (Fig. 10). Press the [CANCEL] key to return to "Online" mode.

- **Test grid**
  Printout of a test grid to evaluate and check the quality of the printed image.

- **Label profile**
  Printout of a diagram with the values measured by the label edge sensor during the media feed.

WARNING!
Before starting any maintenance, power OFF the printer and disconnect the printer from the outlet!

General Cleaning

During the normal operation of the printer, particles of dust and paper can accumulate inside the printer. Remove these particles with a soft brush or a vacuum. The cover of the printer can be cleaned with a standard cleanser.

CAUTION!
Do not use abrasive cleaners or solvents!

Cleaning the Print Roller

Accumulations of dirt on the print roller can lead to impaired media transport. Clean the roller as follows:

1. Open the printhead.
2. Remove the media from the printer.
3. Remove all deposits with isopropyl alcohol and a soft cloth.

Cleaning the Printhead

During printing, the thermal printhead will accumulate dirt such as paper dust or particles of color from the ribbon. This accumulation can cause deterioration of the print quality.

The following cleaning cycles are recommended:

- Direct Thermal Printing: every media roll change
- Thermal Transfer Printing: each ribbon change

CAUTION!
Do not use sharp objects for cleaning the printhead!
Do not touch the protective layer of the printhead with your hands!

Clean the printhead as follows:

1. Open the printhead as far as possible.
2. Remove the media and ribbon from the printer.
3. Clean the surface of the printhead with a cleaning pen, or use a cotton swab dipped in isopropyl alcohol.
4. Let the printhead dry approximately 2 to 3 minutes before powering-on and restarting the printer.
