1 Introduction

1.1 Instructions

Important information and instructions in this documentation are designated as follows:

**Danger!**
Draws your attention to an exceptionally grave, impending danger to your health or life.

**Warning!**
Indicates a hazardous situation that could lead to injuries or material damage.

**Attention!**
Draws attention to possible dangers, material damage or loss of quality.

**Notice!**
Gives you tips. They make a working sequence easier or draw attention to important working processes.

**Environment!**
Gives you tips on protecting the environment.

**Handling instruction**
Reference to section, position, illustration number or document.

**Option**
Option (accessories, peripheral equipment, special fittings).

1.2 Intended Use

- The device is manufactured in accordance with the current technological status and the recognized safety rules. However, danger to the life and limb of the user or third parties and/or damage to the device and other tangible assets can arise during use.
- The device may only be used for its intended purpose and if it is in perfect working order, and it must be used with regard to safety and dangers as stated in the operating manual.
- The device printer is intended exclusively for printing suitable materials that have been approved by the manufacturer. Any other use or use going beyond this shall be regarded as improper use. The manufacturer/supplier shall not be liable for damage resulting from unauthorized use; the user shall bear the risk alone.
- Usage for the intended purpose also includes complying with the operating manual, including the manufacturer’s maintenance recommendations and specifications.

**Notice!**
The complete documentation is included in the scope of delivery on DVD, and can also currently be found in the Internet.
1 Introduction

1.3 Safety Instructions

• The device is configured for voltages of 100 to 240 V AC. It only has to be plugged into a grounded socket.
• Only connect the device to other devices which have a protective low voltage.
• Switch off all affected devices (computer, printer, accessories) before connecting or disconnecting.
• The device may only be used in a dry environment, do not expose it to moisture (sprays of water, mists, etc.).
• Do not use the device in an explosive atmosphere.
• Do not use the device close to high-voltage power lines.
• If the device is operated with the cover open, ensure that people’s clothing, hair, jewelry etc. do not come into contact with the exposed rotating parts.
• The device or parts of it can become hot while printing. Do not touch during operation, and allow to cool down before changing material and before disassembly.
• Risk of crushing when closing the cover. Touch the cover at the outside only. Do not reach into the swivel range of the cover.
• Perform only those actions described in this operating manual. Work going beyond this may only be performed by trained personnel or service technicians.
• Unauthorized interference with electronic modules or their software can cause malfunctions.
• Other unauthorized work on or modifications to the device can also endanger operational safety.
• Always have service work done in a qualified workshop, where the personnel have the technical knowledge and tools required to do the necessary work.
• There are various warning stickers on the device. They draw your attention to dangers. Warning stickers must therefore not be removed, as then you and other people cannot be aware of dangers and may be injured.
• The maximum sound pressure level is 74 dB(A) at A8+ and less than 70 dB(A) at all other types.

**Danger!**
Danger to life and limb from power supply.
► Do not open the device casing.

**Warning!**
This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

1.4 Environment

Recycling

Obsolete devices contain valuable recyclable materials that should be sent for recycling.
► Send to suitable collection points, separately from residual waste.

The modular construction of the printer enables it to be easily disassembled into its component parts.
► Send the parts for recycling.

The electronic circuit board of the device is equipped with a lithium battery.
► Take old batteries to collection boxes in shops or public waste disposal centers.

Installation

2.2 Unpacking and Setting-up the Printer

- Lift the label printer out of the box via the straps.
- Check label printer for damage which may have occurred during transport.
- Set up printer on a level surface.
- Remove foam transportation safeguards near the printhead.
- Check delivery for completeness.

Contents of delivery:
- Label printer
- Power cable
- USB cable
- Operator’s Manual
- DVD with label software, Windows driver and documentation

Notice!
Please keep the original packaging in case the printer must be returned.

Attention!
The device and printing materials will be damaged by moisture and wetness.

- Set up label printers only in dry locations protected from splash water.

2.3 Connecting the Device

The standard available interfaces and connectors are shown in Fig. 3.

2.3.1 Connecting to the Power Supply

The printer is equipped with a wide area power unit. The device can be operated with a supply voltage of 230 V~/50 Hz or 115 V~/60 Hz without adjustment.

1. Check that the device is switched off.
2. Plug the power cable into the power connection socket (23).
3. Plug the power cable into a grounded socket.

2.3.2 Connecting to a Computer or Computer Network

Attention!
Inadequate or no grounding can cause malfunctions during operations.

Ensure that all computers and cables connected to the label printer are grounded.

Connect the label printer to a computer or network by a suitable cable.
For details of the configuration of the individual interfaces ➔ Configuration Manual.

2.4 Switching on the Device

When all connections have been made:

- Switch the printer on at the power switch (22).

The printer performs a system test, and then shows the system status Ready in the display (10).

If an error occurs during the system test, the symbol ☢️ and type of error are displayed.
3 Control Panel

3.1 Structure of the Control Panel

The user can control the operation of the printer with the control panel, for example:

- Issuing, interrupting, continuing and canceling print jobs,
- Setting printing parameters, e.g. heat level of the printhead, print speed, interface configuration, language and time of day (> Configuration Manual),
- Start the test functions (> Configuration Manual),
- Control stand-alone operation with a memory module (> Configuration Manual),
- Update the firmware (> Configuration Manual).

Many functions and settings can also be controlled by software applications or by direct programming with a computer using the printer’s own commands. > Programming Manual for details.

Settings made on the control panel make the basic settings of the label printer.

Notice!
It is advantageous, whenever possible, to make adaptations to various print jobs in the software.

The control panel consists of a graphic display (1) and the navigator pad (2) with five integrated keys.

The graphic display indicates the current status of the printer and the print job, indicates faults and shows the printer settings in the menu.

3.2 Symbol Displays

The symbols shown in the following table may appear in the status line of the display, depending on the printer configuration. They enable the current printer status to be seen quickly. For the configuration of the status line >> the Configuration Manual.

<table>

</tbody>
</table>

Table 4 Key functions in the offline menu
Notice!
For adjustments and simple installation work, use the accompanying Allen key located in the bottom section of the print unit. No other tools are required for the work described here.

4.1 Opening and Closing the Support Bracket A8+

For additional bearing of the roller and printhead assemblies and the ribbon hubs the A8+ is equipped with a support bracket (1).

Notice!
For loading and removing material on A8+ it is necessary to open and close the support bracket in addition to the steps described in the following chapters.

Fig. 6 Support bracket A8+

Opening the Support Bracket

- Open cover.
- Turn lever (2) counterclockwise to lift the printhead.
- Open the support bracket (1). Labels and transfer ribbon can be loaded or removed.

Closing the Support Bracket

- Turn lever (2) counterclockwise until it stops.
- Close the support bracket (1). Ensure that the all pins (3) are captured by the drillings of the support bracket.
- Turn lever (2) clockwise to lock the printhead.

Attention!
Loss of print quality.
Operate or adjust the printer with closed support bracket only!
Operation with support bracket open is not prevented but the print quality may become poor.
4 Loading Material

4.2 Loading Labels from Roll

4.2.1 Positioning the Label Roll on the Roll Retainer

1. Open cover (9).
2. Turn ring (2) at the margin stop (1) counterclockwise, so that the arrow points to the symbol , and thus release the margin stop.
3. Remove the margin stop (1) from the roll retainer (4).
4. Load label roll (3) on the roll retainer in such a way that the labels can be inserted into the printhead in the right position. The printing side of the labels must be visible from above.
5. Re-mount the margin stop (1) onto the roll retainer (4). Push the margin stop (1) to the roll until it stops.
6. Turn ring (2) clockwise, so that the arrow (10) points to the symbol , and thus fix the margin stop (1) on the roll retainer (4).
7. Supplying longer label strips:
   - For Peel-Off or Rewind mode: approx. 60 cm
   - For Tear-Off mode: approx. 40 cm

4.2.2 Inserting a Label Strip into the Printhead

1. Turn lever (8) counterclockwise to lift the printhead.
2. Push guide ring on axis (6) all the way out.
3. Guide label strip to the print unit above the internal rewinder (5).
4. Guide label strips below the axis (6) and through the label sensor (7) in such a way that it exits the print unit between the printhead and the print roller.
5. Push guide ring on axis (6) against the outer edge of the label strip.
4.2.3 Setting the Label Sensor

The label sensor (2) can be shifted perpendicular to the direction of paper flow for adaptation to the label medium. The sensor unit (1) of the label sensor is visible from the front through the print unit and is marked with a indentation in the label sensor retainer.

- Position label sensor with tab (3) in such a way that the sensor (1) can detect the label gap or a reflex or perforation mark.
- or, if the labels deviate from a rectangular shape, -
- Align label sensor using the tab (3) with the front edge of the label in the direction of paper flow.

For use in tear-off mode only:
- Turn lever (Fig. 7, Item 8) clockwise to lock the printhead.

The label roll is loaded for use in tear-off mode.
In rewind mode, the labels are wound up internally after printing for later use.

1. Remove the locking system for rewind mode if necessary (4.8 on page 23) and install rewind guide plate (4.7 on page 22).
2. Guide label strip around the rewind guide plate (4) to the internal rewinder (2).
3. Hold rewinder (2) firmly and turn knob (3) clockwise until it stops.
4. Push label strip under a bracket (1) of the rewinder and turn knob (3) counterclockwise until it stops.
   The rewinder is fully spread, thus gripping the label strip firmly.
5. Turn rewinder (2) counterclockwise to tighten the label strip.
6. Turn lever (5) clockwise to lock the printhead.

The label roll is loaded for use in rewind mode.
4.2.5 Winding up the Liner in Peel-Off mode

In Peel-Off mode, the labels are removed after printing, and only the liner is wound up internally.

1. Lift the pinch roller (4) off the rewind assist roller (5).
2. Remove labels from the first 100 mm of the liner.
3. Guide liner to the rewinder (2) around the dispense plate (6) and the rewind assist roller (5).
4. Hold rewinder (2) firmly and turn knob (3) clockwise until it stops.
5. Push liner under a bracket (1) of the rewinder (2) and turn knob (3) counterclockwise until it stops. The rewinder is fully spread, thus gripping the liner firmly.
6. Turn rewinder (2) counterclockwise to tighten the liner.
7. Slightly loosen top fixing screw at the locking system with Allen key and position the pinch roller (4) centrally to the liner.
8. Close the locking system and tighten top fixing screw at the locking system.
9. Turn lever (7) clockwise to lock the printhead.

The label roll is loaded for use in peel-off mode.
4 Loading Material

4.2.6 Setting the Head Locking System

The printhead is pushed on via two plungers (on A8+ three plungers). The location of the outer plunger must be set to the width of the label medium used so as to

• achieve even print quality across the entire label width
• prevent wrinkles in the feed path of the transfer ribbon
• prevent premature wearing of the print roller and printhead.

Fig. 11 Setting the head locking system

1. Turn lever (3) clockwise to lock the printhead.
2. Loosen threaded pin (1) at outer plunger (2) with Allen key.
3. Position outer plunger (2) above the outer label edge and tighten threaded pin (1).
4. On A8+ align the middle plunger to the middle of the labels.
4.3 Removing the Wound Roll

1. Turn lever (1) counterclockwise to lift the printhead.
2. Cut label strip and wind it fully around the rewinder (3).
3. Hold rewinder (3) firmly and turn knob (2) clockwise.
   The rewinder spindle relaxes and the wound roll (4) is released.
4. Remove wound (4) roll from rewinder (3).
4.4 Loading Fanfold Labels

1. Turn ring (2) counterclockwise, so that the arrow points to the symbol ⊞, and thus release the margin stop (1).
2. Move the margin stop (1) outwards as far as possible.
3. Position label stack (4) behind the printer. Ensure that the labels on the strip are visible from above.
4. Guide label strip to print unit via the roll retainer (3).
5. Move the margin stop (1) against the media strip until chassis (5) and margin stop (1) touch the media strip without clamping or bending it.
6. Turn ring (2) clockwise, so that the arrow points to the symbol ⊟, and thus fix the margin stop (1) on the roll retainer (3).
7. Insert label strip into printhead (> 4.2.2 on page 13).
8. Set label sensor (> 4.2.3 on page 14).
9. Set head locking system (> 4.2.6 on page 17).
10. Turn lever (6) clockwise to lock the printhead.
4.5 Loading Transfer Ribbon

**Notice!**

With direct thermal printing, do not load a transfer ribbon; if one has already been loaded, remove it.

1. Clean printhead before loading the transfer ribbon (> 6.3 on page 25).
2. Turn lever (5) counterclockwise to lift the printhead.
3. Slide transfer ribbon roll (3) onto the ribbon supply hub (4) until it stops and so that the color coating of the ribbon faces downward when being unwound. No rotation direction is specified for the ribbon supply hub (4).
4. Hold transfer ribbon roll (3) firmly and turn knob on ribbon supply hub (4) counterclockwise until the transfer ribbon roll is secured.
5. Slide suitable transfer ribbon core (1) onto the transfer ribbon take-up hub (2) and secure it in the same way.
6. Guide transfer ribbon through the print unit as shown in Fig. 14.
7. Secure starting end of transfer ribbon to the transfer ribbon core (1) with adhesive tape. Ensure counterclockwise rotation direction of the transfer ribbon take-up hub here.
8. Turn transfer ribbon take-up hub (2) counterclockwise to smooth out the feed path of the transfer ribbon.
9. Turn lever (5) clockwise to lock the printhead.

Fig. 14 Feed path of the transfer ribbon
4.6 Setting the Feed Path of the Transfer Ribbon

Transfer ribbon wrinkling can lead to print image errors. Transfer ribbon deflection can be adjusted so as to prevent wrinkles.

Notice!
A maladjustment of the head locking system may also cause ribbon wrinkling (4.2.6 on page 17).

Notice!
The adjustment is best carried out during printing.
1. Read current setting on the scale (1) and record if necessary.
2. Turn screw (2) with Allen key and observe the behavior of the ribbon.
   In the + direction, the inner edge of the transfer ribbon is tightened, and the outer edge is tightened in the - direction.
4.7 Removing and Installing the Rewind Guide Plate, Dispense Plate or Tear-off Plate

To convert the printer for use in another operating mode, a rewind guide plate, a dispense plate or a tear-off plate may need to be installed.

**Attention!**
For printer versions with a locking system on the rewind assist roller, the locking system must be removed for operation in rewind mode before installation of the rewind guide plate (>
4.8 on page 23).

---

**Fig. 16** Removing and installing the rewind guide plate, dispense plate or tear-off plate

**Removing a plate**
1. Loosen screws (2) several turns.
2. Slide plate (1) to the right and remove it.

**Installing a plate**
1. Place plate (1) onto the screws (2) and slide to the left completely.
2. Tighten screws (2).
4.8 Removing and Installing the Locking System

Fig. 17 Removing and installing the locking system

Removing the locking system
1. Position printer at edge of table so that the oblong hole is accessible from below.
2. Screw out screws (1) (2) and remove them.
3. Remove the pinch roller (4) and bottom plate (3).

Installing the locking system
1. Position printer at edge of table so that the oblong hole is accessible from below.
2. Place the pinch roller (4) into oblong hole and lightly tighten screw (1) of bottom plate (3) from above.
3. Lightly tighten screw (2) of bottom plate (3) from below.
4. Align the pinch roller (4) with center of label and tighten screws.
Attention!
Printhead damage caused by improper handling!

- Do not touch the underside of the printhead with the fingers or sharp objects.
- Ensure that the labels are clean.
- Ensure that the label surfaces are smooth. Rough labels act like emery paper and reduce the service life of the printhead.
- Print with the lowest possible printhead temperature.

The printer is ready for operation when all connections have been made and labels and, if applicable, the transfer ribbon have been loaded.

5.1 Synchronization of the Paper Feed

After the label stock has been inserted, for peel-off or cutting mode a synchronization of the paper feed is required. That way the first label, which is detected by the label sensor, will be fed out of the printer. So the synchronization avoids, that blank labels are peeled-off together with the first printed label or that the first cut label would be too long. Both effects can cause useless first labels.

- Press the feed key to start the synchronization.
- Remove the blank labels peeled-off or cut during the synchronization.

Notice!
Synchronization is not necessary if the printhead was not opened between different print jobs, even if the printer was switched off.

5.2 Tear-off Mode

In tear-off mode, labels or continuous media are printed. After printing, the label strip can be separated by hand. The label printer must be equipped with a tear-off plate for this [4.7 on page 22.

5.3 Peel-off Mode

In Peel-off mode, the labels are automatically peeled off the liner after printing and presented for removal. The liner is wound up by the internal rewinder. This mode is available only on the peel-off printer versions. The printer must be equipped with a dispense plate and one of the following accessory devices for this:

- Present sensor PS6 or PS8
- Peel-off adapter PS5
- Applicator A1000

Notice!
Peel-off mode must be activated in the software. This is done with the "P command" in the direct programming, [Programming Manual.

Notice!
A sensor or an external signal releases the printout of the next label after a label has been removed from the peel-off position.

5.4 Internal Rewinding

The labels are wound up internally after printing with the carrier medium for later use. This mode is available only on the peel-off printer versions. The label printer must be equipped with a rewind guide plate for this [4.7 on page 22.
6 Cleaning

6.1 Cleaning Information

**Danger!**
Risk of death via electric shock!
- Disconnect the printer from the power supply before performing any maintenance work.

The label printer requires very little maintenance. It is important to clean the thermal printhead regularly. This guarantees a consistently good printed image and plays a major part in preventing premature wear of the printhead. Otherwise, the maintenance is limited to monthly cleaning of the device.

**Attention!**
The printer can be damaged by aggressive cleansers.
Do not use abrasive cleaners or solvents for cleaning the external surfaces or modules.

- Remove dust and paper fluff from the print area with a soft brush or vacuum cleaner.
- The cover of the printer can be cleaned with a standard cleanser.

6.2 Cleaning the Print Roller
Accumulations of dirt on the print roller may impair the media transport and the print quality.
- Lift the printhead.
- Remove labels and transfer ribbon from the printer.
- Remove deposits with roller cleaner and a soft cloth.
- If the roller appears damaged, replace it [Service Manual].

6.3 Cleaning the Printhead
Cleaning intervals:
- direct thermal printing - every media roll change
- thermal transfer printing - every ribbon roll change

Substances may accumulate on the printhead during printing and adversely affect printing, e.g. differences in contrast or vertical stripes.

**Attention!**
Printhead can be damaged!
Do not use sharp or hard objects to clean the printhead.
Do not touch protective glass layer of the printhead.

**Attention!**
Risk of injury from the hot printhead line.
Ensure that the printhead has cooled down before starting cleaning.

- Lift the printhead.
- Remove labels and transfer ribbon from the printer.
- Clean printhead surface with special cleaning pen or a cotton swab dipped in pure alcohol.
- Allow printhead to dry for 2–3 minutes before commissioning the printer.
6.4 Cleaning the Label Sensor

**Attention!**
Label sensor can be damaged!
The cleaning method described here cannot be used for the A6+ and A8+ label printers. There is a risk that the label sensor cable could be ripped out.
▶ In the case of the A6+ and A8+ label printers, commission cleaning by the Service Department.

**Attention!**
Label sensor can be damaged!
Do not use sharp or hard objects or solvents to clean the label sensor.

The label sensor can become dirty with paper dust. This can adversely affect label detection.

---

Fig. 18 Cleaning the label sensor

1. Turn lever (1) counterclockwise to lift the printhead.
2. Remove labels and transfer ribbon from the printer.
3. Remove Allen key (5) from its retainer.
4. Press the latch (3) and slowly pull label sensor outward via the tab (4). Ensure that the label sensor cable is not tensioned by this.
5. Clean label sensor and sensor units (2) with brush or cotton swab soaked in pure alcohol.
6. Push label sensor back via tab (3) and set it (> 4.2.3 on page 14).
7. Push Allen key (4) into retainer.
8. Reload labels and transfer ribbon.
7 Fault Correction

7.1 Types of Errors

The diagnostic system indicates on the screen if an error has occurred. The printer is set into one of the three possible error states according to the type of error.

<table>

- Small label sizes, thin materials or strong glue can lead to limitations. Critical applications need to be tested and cleared.
- Note the bending stiffness! Material must be flexible to follow the radius of the print roller!

Not recommended!  Not recommended!
9.1 **Reference to the EU Declaration of Conformity**

The printers of the A+ series comply with the relevant fundamental regulations of the EU Rules for Safety and Health:

- Directive 2014/35/EU relating to electrical equipment designed for use within certain voltage limits
- Directive 2014/30/EU relating to electromagnetic compatibility
- Directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment

**EU Declaration of Conformity**

9.2 **FCC**

**NOTE**: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. The equipment generates, uses, and can radiate radio frequency and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user may be required to correct the interference at his own expense.
