

Laser marking on machining tools

Material: HSS and carbide metal

Marking by: engraving and oxidation

Cycle time: 10 sec. (incl. handling)

Installation: 09/2003

Description Palletized machining tools are moved into the working area by means of a robot. The robot automatically shuts the working station according to LSK 1 and undertakes the function of the rotary, thus enabling the tools to be marked all over. The laser marks the tools' type-specific information.
